V-TOL SIGNS TEAMING AGREEMENT

TCOM L.P., the global leader in tethered aerostat technology, and a consortium of Australian based organisations headed up by V-TOL Aerospace and Docklands Science Park have signed off on an exclusive Teaming Agreement for Australia.

Managing Director of V-TOL Aerospace Mark Xavier said, “Our bid to whole of Government and to industry will provide a cost-effective, hi-resolution, persistent, broad area surveillance and communications network, including data and broadband, across the exposed and isolated air/sea gap of Northern Australia. Our strategy is designed to allow any authorised Government agency access to real-time surveillance and weather data while providing a significant non-satellite communications umbrella to users within the footprint”.

He continued, “This solution will also allow for the more effective employment of existing surveillance resources securing Australia’s northern borders, dramatically improving communications and commercial services”.

Dave Barlow, President of TCOM, L.P. said, “Many do not know that TCOM stands for **T**ethered **C**OMmunications, so in a way, this joint effort is a return to our roots. This is a unique opportunity to combine TCOM’s 35 years of Lighter-Than-Air surveillance technologies with the radar, communications and data networking capabilities of V-TOL to provide a total solution across the northern frontier of Australia”.

V-TOL Aerospace Pty Limited is committed to delivering cost-effective C4ISR solutions to the peoples of Australia, NZ and Oceania.
