

i-Product Update

V-TOL i-Product:	i-Com™
Date:	4 May 2005
Subject:	i-COM™ components used successfully in military exercise

Elements of V-TOL's i-Com™ system were recently used as an integral part of a Joint Air Land Sea Amphibious Assault exercise in Asia. Live video feed was transmitted using these components from the Assault Assets to Command and Control Staff participating in the exercise.

V-TOL Managing Director, Mark Xavier said, "we are pleased that the i-Com™ related systems proved to be extremely effective in providing live video feed during this military exercise. The technology was described as the "Bell of the Ball."

About i-Com

V-TOL i-Com™ is a stand alone, secure (optional) and fully meshed voice & data communications system. Based on wireless LAN/WAN technologies, i-Com™ allows V-TOL i-Products™ to communicate and provide CCD-TV quality video feed in real time to other V-TOL i-System™ elements in a single or multiple operating environment(s).

i-Com™ is rugged, proven (13,000+hrs in remote locations), versatile, easily deployable and reusable making it ideal for fast moving operations in remote areas for extended periods of time.

By employing solar technology provided by V-TOL, i-Com™ can also be used in a set-up and forget configuration in remote locations.
